

Seoul Asan Hospital Upgrades its Medical Information System to Relaunch Itself Into a Complete Patient-Centered Digital Hospital.

Many hospitals have recently revamped the way they function by implementing state of the art, integrated, medical information system technologies. The Seoul Asan Hospital was a recent addition to this list as it digitalized its Order Communication System (OCS) and Clinical Decision Support System (CDSS). This was done through the deployment of 45 units of DTU-1631 Interactive Pen Displays from Wacom that enabled the hospital to rebrand itself into a patient-centered digital hospital, offering world class healthcare services to patients.

Fast Hospital Processes in Registration, Selection and Treatment

To improve the patient experience and provide better healthcare service, Seoul Asan Hospital deployed Wacom's DTU-1631 Interactive Pen Displays at the registration counter at the main hospital building.

The new and improved medical information system delivers the most practical and convenient experience to users. By simplifying the complexity involved in managing internal hospital systems, such as, hospital affairs management, general administration, prescription delivery, examination and treatment support management, it has a direct impact on the comfort and convenience of the hospital's patients.

High-Quality Medical Service by Making the Treatment Process More Efficient

The new digitalized medical information system replaces the long and cumbersome processes that had caused delays in initiating treatment. In the past, everything was done manually, which not only required additional time and effort, but also increased the risk of data loss, should papers charts be misplaced.

With the introduction of the medical information system, managing treatment related data is a breeze and it has significantly improved the working environment for the medical staff, thus enabling the provision of high-quality medical service to patients. It also allows the medical staff to explain the disease and treatment process more easily and comfortably to patients.
